Thrombospondin (TSP) Ab-4 (Clone A6.1)

**Mouse Monoclonal Antibody**

Cat. #MS-421-P0, -P1, or -P (0.1ml, 0.5ml, or 1.0ml at 200μg/ml) (Purified Ab with BSA and Azide)
Cat. #MS-421-P1ABX or -PABX (0.1ml or 0.2ml at 1.0mg/ml) (Purified Ab without BSA and Azide)
Cat. #MS-421-B0, -B1, or -B (0.1ml, 0.5ml, or 1.0ml at 200μg/ml) (Biotin-Labeled Ab with BSA and Azide)
Cat. #MS-421-R7 (7.0ml) (Ready-to-Use for Immunohistochemical Staining)
Cat. #MS-421-PCS (5 Slides) (Positive Control for Histology)

**Description:** Thrombospondin is a protein from platelet a-granules. It is secreted at sites of platelet activation and aggregation and is involved in the processes of chemotaxis, adhesion, proliferation and differentiation of leukocytes, fibroblasts, smooth muscle and endothelial cells.

**Comments:** Ab-4 inhibits TSP-collagen interaction. Its binding to TSP is unaffected by glycosaminoglycans (e.g. hyaluronic acid, chondroitin sulfate, and heparin). Its binding is enhanced by EDTA i.e. at low conc. of Ca\(^{2+}\). It shows no cross-reaction with fibronectin, fibrinogen, and von Willebrand factor. Shows a mild cross reaction with TSP 2.

**Mol. Wt. of Antigen:** ~450kDa (non-reduced)
170 to 180kDa (reduced)

**Epitope:** Collagen Type V-binding domain of TSP

**Species Reactivity:** Human, Cow, Pig, Horse, Dog, Sheep, Mouse, and Rat. Others-not known

**Clone Designation:** A6.1

**Ig Isotype:** IgG1

**Immunogen:** Reduced and alkylated purified human TSP (fully denatured) from the supernatant of thrombin-activated platelets.

**Applications and Suggested Dilutions:**
- Electron Microscopy
- Flow Cytometry
- Immunofluorescence
- Immunoprecipitation (Native verified) (Use Protein G) (Ab 2μg/mg protein lysate)
- Western Blotting (at 1-2μg/ml for 2hrs at RT) (Ab-11 is better)
- Immunohistology (Formalin/paraffin) (Ab 1:25 to 1:50 for 20 min at RT using the LP system)
- [Staining of formalin-fixed tissues requires boiling tissue sections in 10mM citrate buffer, pH 6.0, (NEOMARKERS’ Cat. #AP-9003), for 10-20 min followed by cooling at RT for 20 min.]

The optimal dilution for a specific application should be determined by the investigator.

**Staining tips:** If the staining is too light, use lower dilution or longer time.
If the staining is too strong, use higher dilution or shorter time.

**Positive Control:** Platelets in placenta, megakaryocytes in bone marrow.

**Cellular Localization:** Secretory granules, Golgi complex, endoplasmic reticulum, extracellular matrix

**Supplied As:** 200μg/ml antibody purified from the ascites fluid by Protein G chromatography. Prepared in 10mM PBS, pH 7.4, with 0.2% BSA and 0.09% sodium azide. Also available without BSA and azide at 1mg/ml. Or Prediluted antibody which is ready-to-use for staining of formalin-fixed, paraffin-embedded tissues.

**Storage and Stability:**
Ab with sodium azide is stable for 24 months when stored at 2-8°C. Antibody WITHOUT sodium azide is stable for 36 months when stored at below 0°C.

**Limitations and Warranty:**
Our products are intended FOR RESEARCH USE ONLY and are not approved for clinical diagnosis, drug use or therapeutic procedures. No products are to be construed as a recommendation for use in violation of any patents. We make no representations, warranties or assurances as to the accuracy or completeness of information provided on our data sheets and website. Our warranty is limited to the actual price paid for the product. NeoMarkers is not liable for any property damage, personal injury, time or effort or economic loss caused by our products.

**Material Safety Data:**
This product is not licensed or approved for administration to humans or to animals other than the experimental animals. Standard Laboratory Practices should be followed when handling this material. The chemical, physical, and toxicological properties of this material have not been thoroughly investigated. Appropriate measures should be taken to avoid skin and eye contact, inhalation, and ingestion. The material contains 0.09% sodium azide as a preservative. Although the quantity of azide is very small, appropriate care should be taken when handling this material as indicated above. The National Institute of Occupational Safety and Health has issued a bulletin citing the potential explosion hazard due to the reaction of sodium azide with copper, lead, brass, or solder in the plumbing systems. Sodium azide with copper, lead, brass, or solder in the plumbing systems. Sodium azide with copper, lead, brass, or solder in the plumbing systems. Sodium azide with copper, lead, brass, or solder in the plumbing systems. Sodium azide with copper, lead, brass, or solder in the plumbing systems. Sodium azide with copper, lead, brass, or solder in the plumbing systems.

Cat. #MS-421-PCS (5 Slides) (Positive Control for Histology)

azide forms hydrazoic acid in acidic conditions and should be discarded in a large volume of running water to avoid deposits forming in metal drainage pipes.
